

## Klein K10-A Colorimeter

For Use with CalMAN Software

**\$6900**

### Klein K10-A Key Features

- Highly advanced low-light handling.
- Light mixing chamber.
- Large photodiodes.
- Exceptionally accurate filters.
- Optimized optics.
- Aiming lights for positioning.
- Rugged construction.
- NIST certified for accuracy.
- Supports all display technologies, including plasma, LED, front projection, and OLED.
- Compatible with CalMAN Monitor Calibration software.

The Klein K10-A is the ultimate light measurement device for any calibration, unmatched in sensitivity, stability and speed. Optimized for use with CalMAN monitor calibration software, the Klein K10-A is the perfect meter for AV or studio professionals with exacting demands for color accuracy. As the Klein K10-A is a non-contact meter, it especially excels in video wall and front projection calibrations.

The Klein K10-A has exceptionally accurate filters that bring readings closer to CIE1931 than any other colorimeter, while large photodiodes make the Klein K10-A the fastest. In addition to these features, the Klein K10-A's unique light mixing chamber ensures no polarization errors occur. For low-light readings, the Klein K10-A has unparalleled sensitivity. With the Klein K10-A, you can rest assured that your meter is providing the fastest, most accurate, most reliable readings of any colorimeter available.

The Klein K10-A comes with several accessories, including a carrying case, small tripod, and rubber boot for direct-contact readings.
